Executive Summary

June 13, 2023

City of Lansing Employees' Retirement System
124 W. Michigan Avenue
8th Floor
Lansing, MI 48933

Members of the Board:

The following report sets forth the Actuarial Valuation of the City of Lansing Employees' Retirement System (the System) as of December 31, 2022. The report is based on participant data and asset summary as submitted by the Plan Administrator and the City finance department. We relied on this information without auditing it.

INVESTMENT PERFORMANCE

The total Market Value of Plan Assets for the plan year ending December 31, 2022 was \$189,417,595. Plan assets exclude from this a reserve for healthcare benefits. The total yield of the fund for the plan year ending December 31, 2022 was -13.4% on the market value of assets and -4.0% on an actuarial basis, taking into account recognition of prior gains and losses.

The Plan uses a smoothing method to determine the City's contributions. Under this method, asset gains or losses are spread over a 5-year period. The gains and losses are determined every year by comparing actual investment returns with expected asset performance.

Details of the development of the Actuarial Value of Assets are shown on page 8.

FUNDING PROGRESS

The Actuarial Accrued Liability as of December 31, 2022 is \$310,067,771 compared to the Actuarial Value of Assets (excluding healthcare reserve) of \$164,320,080, resulting in a plan funded ratio of 53.0%. On a market value basis, this ratio is 46.8%. Details are on page 14.

CONTRIBUTION

The Actuarially Determined Employer Contribution (ADEC) for fiscal year 2024 is \$13,165,598, which is estimated to be 45.8% of payroll. About 5.2% of payroll represents the Normal Cost, with the remaining amount representing a payment towards the System's unfunded liability. Details are on page 15.

ASSUMPTION AND METHOD CHANGES

There have been no changes in actuarial assumptions or methods since the prior valuation.

BENEFIT CHANGES

The final average pay period was changed for several bargaining units, resulting in a slight decrease in the System actuarial accrued liability and ADEC.

Actuarial Certification

The purposes of this report are to establish the City contribution for the next fiscal year, and to evaluate the funding progress of the System.

The accounting report for the System, under GASB 67 and 68, is provided under separate cover, and serves a different purpose. All the figures presented in this report are to be used for funding and contribution purposes.

This report has been prepared in accordance with generally accepted actuarial principles and practices. In the opinion of the Retirement Board and its actuary, the actuarial assumptions used are reasonable related to Retirement System experience and expectations, and represent the best estimate of Retirement System experience.

The undersigned are members of the American Academy of Actuaries, and are qualified to render the actuarial opinions presented in this report.

Respectfully Submitted,

Employees Savings Fund

<i>Purpose</i>	Keep track of employee contribution balances, and interest credited to such. Interest is credited annually at 3.0%.
<i>Relevance to Plan Funding</i>	Does not directly impact plan funding

Retirement Reserve Fund

<i>Purpose</i>	Provides funds to finance regular benefit payments to retirees. Interest is credited annually at the assumed rate of return. An adjustment is applied annually to correspond with changes in the market value of plan assets.
<i>Relevance to Plan Funding</i>	Does not directly impact plan funding

Member Benefit Reserve (MBR)

<i>Purpose</i>	Provides funds to finance supplemental benefit payments to retirees based on prior early retirement programs (while reserve balance is positive). Interest is credited annually at a 5-year average rate.
<i>Relevance to Plan Funding</i>	Actuarial liability for supplemental benefit deemed to be equal to the value of the reserve

Healthcare Reserve

<i>Purpose</i>	Funds invested with pension assets, but segregated to be used for retiree healthcare benefits. Interest is credited annually at the same rate as the MBR.
<i>Relevance to Plan Funding</i>	Excluded from pension assets to determine contributions towards pension funds

* These amounts are based on one set of assumptions. If actual experience is less favorable than assumed, then City contributions will be higher. Estimated member contributions above do not include purchases of service.

Section 4: Actuarial Assumptions and Methods

Funding Method and Amortization: Entry Age Normal Actuarial Cost Method. The contribution equals the sum of the normal cost and the amount necessary to amortize the unfunded actuarial liability as a level percent of payroll over a closed period (18 years remaining).

Asset Smoothing Method: Investment gains and losses are determined annually and each is spread over a 5- year period. This is done on a total fund basis, with an 80% to 120% corridor around market value. The adjusted value of the healthcare reserve is then excluded from the valuation assets.

Investment Return: 7.00% compounded annually, net of investment expenses

Cost of Living (inflation): The cost of living as measured by the Consumer Price Index (CPI) is assumed to increase at the rate of 2.50% per year

Salary Increases: Increases in salary are assumed to increase with inflation annually, plus an additional amount that varies based on the service of the member as shown below:

<u>Years of Service</u>	<u>UAW</u>	<u>Years of Service</u>	<u>All Others</u>
0-9	3.25%	0-5	7.50%
10-18	1.00%	6-15	1.00%
19 +	0.50%	16+	0.00%

Mortality: Pub2010G Tables (below median), 50% for pre-retirement deaths. For Disabled members, the disabled versions of these tables are assumed. Each of these tables is projected generationally with Scale SSA (2021 intermediate long-term).

Percent Married: 90% of participants are assumed to be married. Male spouses are assumed to be three years older than their female spouse.

Disability: Rates of disability vary based on the age of the member as shown below. Half of all disabilities are assumed to be duty related. Disability rates are assumed to stop when retirement rates begin.

Sample rates are shown below:

<u>Age</u>	<u>Rate</u>
20	0.0004
30	0.0004
40	0.0013
50	0.0041
60	0.0090

Termination: Rates of termination vary based on the service of the member.
Sample Rates are shown below:

<u>Years of Service</u>	<u>UAW</u>	<u>All Others</u>
0	12.0%	24.0%
1	9.0%	20.9%
2	7.0%	18.2%
3	7.0%	15.8%
5	5.0%	12.0%
10	2.0%	6.0%
15	1.0%	2.5%
20+	1.0%	2.5%

Retirement: Rates of retirement vary based on the age of the member as shown below. Rate is applied only if the member is eligible to retire.

<u>Age</u>	<u>UAW</u>	<u>Age</u>	<u>Others</u>
50-54	60%	50-54	50%
55-57	40%	55	5%
58	50%	56	10%
59-64	20%	57	15%

	50% of the ages 55-		
UAW Females	64 rates applies	59-64	25%
		65-69	20%
		70+	100%

Changes in assumptions since the prior valuation

None.

The assumptions outlined above are based on the 2015 – 2019 experience study. The next study will cover 2020 – 2024.

Termination Prior to Retirement

Eligibility	Vesting is after 8 years of credited service
Form of Benefit	Benefit is payable as a Life Annuity beginning at age 58 for new Plan Members and at the age at which age plus service equals 65 for Old Plan Members (except UAW).

Duty Disability

Eligibility	Members are eligible for Duty Disability Retirement benefits immediately upon employment.
Benefit Amount	Benefit is paid at the effective date of disability retirement as a Life Annuity and is equal to the accrued Retirement Benefit, with additional service granted to age 60. During the worker's compensation period, the disability benefit may not exceed the difference between the member's final compensation and the worker's compensation amount. Upon the attainment of age 60, disabled retirees are transferred to service retirement status.

Non-Duty Disability

Eligibility	Members are eligible for Non-Duty Disability Retirement benefits after completing 10 years of service.
Benefit Amount	Benefit is paid at the effective date of disability retirement as a Life Annuity and is equal to the accrued Retirement Benefit, with a minimum benefit equal to 25% of final average compensation.

Death incurred in the Line of Duty

Eligibility	Benefit is payable to the survivors of a member who died as a result of an injury or disease arising out of and in the course of duty.
Benefit Amount	Benefit is paid upon termination of the survivor's workers' compensation period as a Life Annuity and is equal to the survivor's weekly workers' compensation converted to an annual basis.

Non-Duty Pre-Retirement Death

Eligibility	The non-duty pre-retirement death benefit is payable upon the death of a member after earning 8 years of credited service.
Benefit Amount	Benefit is paid to the surviving spouse as a Joint and Survivor benefit and is computed in the same manner as the Normal Retirement Benefit.

Optional Benefit Forms

Prior to retirement, a member may elect to convert the retirement allowance into a benefit of equivalent actuarial value in accordance with one of the optional forms described below.

- a. Cash Refund Annuity - If a member dies before receiving the total value of accumulated member contributions, the remaining member contributions are payable to designated beneficiary(ies) at the time of death.
- b. 50% or 100% Joint and Survivor Annuity
- c. Social Security Level Income ("Equating Pension") - Any member who retires prior to age 65 may elect to have his retirement allowance actuarially equated to provide an increase retirement allowance to age 65, and a reduced retirement allowance payable thereafter. The increased retirement allowance shall approximate the sum of the member's reduced retirement allowance payable after age 65 and the member's estimated Social Security Primary Insurance Amount.

Post - Retirement Benefit Adjustments

One-time post-retirement benefit increases were granted in 1984, 1987 and 1998.

Effective January 1, 1999, and each January 1 thereafter, certain eligible retirees and beneficiaries receive annual benefit increases, financed by the Members' Benefit Fund reserve while it maintains a positive balance. Retirees/Beneficiaries must meet both of the following conditions:

- 1) Has been retired at least 6 months as of the January 1 increase date
- 2) Age 60 as of the January 1 increase date

For a retiree/beneficiary who elected a 50% or 100% Joint and Survivor Annuity, the maximum annual increase is equal to \$200 (\$100 for the beneficiary if 50% option is elected) times a ratio of the original Joint and Survivor benefit to the original straight life annuity benefit.

For all other retirees/beneficiaries, the maximum annual increase is \$200.

Changes in Plan provisions since the prior valuation

The final average pay period was changed for several bargaining units, as noted above.

Glossary of Terms

Actuarial Accrued Liability (AAL):	The portion of benefits deemed to be accrued by participants based on past service. The AAL serves as the asset funding target, when annual contributions are determined.
Actuarial Value of Assets (AVA):	The smoothed value of assets, used to compute the Unfunded AAL. The purpose of the AVA is to control volatility in annual cash contributions .
Amortization of Unfunded Liability:	The portion of the annual cash contribution that represents a portion of the Unfunded AAL. The amortization can be positive or negative.
Actuarially Determined Employer Contribution (ADEC):	The contribution determined by the actuary for funding purposes .
Market Value of Assets (MVA):	The total value of Plan assets available to pay benefits.
Normal Cost:	That portion of the annual contribution that represents one year's accrual of benefits. In funding calculations, this is known as the Service Cost.
Unfunded Actuarial Accrued Liability:	The difference between the Actuarial Value of Assets and the Actuarial Accrued Liability, used for funding purposes .

Appendix I: 20 Year Projection of Funding and Contributions

The graphs below show a projection of expected funding progress and City contributions to the Fund. We can see that the Plan is on a path to eliminating the unfunded liability (top graph, red line) and significantly improving the funding ratio. During this time, the City contribution rate is expected to remain near 50% of payroll, before eventually declining. The actual funding progress and contributions over this time period will differ from what is shown here, due to the actual experience of the Plan.

As shown in the second graph the majority of the contribution is currently, and is expected to continue to be, a payment towards the unfunded actuarial liability.

(1) Fiscal year 2015 Contribution reflects changes made to assumed return and inflation from 7.8% and 3.3% to 7.6% and 3.1%, respectively.

(2) Reflects changes made to actuarial assumptions based on an Experience Study completed in 2016, including assumed return of 7.40%, with 2.925% underlying inflation.

(3) Reflects decrease in assumed return to 7.25%.

(4) Paid in calendar year 2021, so not reflected in System assets as of 12/31/2019

(5) Reflects changes made to actuarial assumptions as of 12/31/2020, including return assumption of 7.00%, with underlying 2.50% inflation.

Appendix III: Valuation Sensitivity

The figures shown on this page are based on the same assumptions, except for the amortization period and investment return assumption. The valuation is otherwise in compliance with the State's Act 202 Uniform assumptions and amortization for fiscal year 2023. The following shows the impact of the two changes.

Actuarial Accrued Liability State Uniform Assumptions	12/31/2022
	6.85%
Total Actuarial Accrued Liability	\$313,888,280
Actuarial Value of Assets	164,320,080
Unfunded Actuarial Accrued Liability	149,568,200
Plan Funding Ratio	52.3%

City Contribution State Uniform Assumptions	FY2024
	6.85%
1) Total Entry Age Normal Cost	\$3,060,466
2) <u>Estimated Employee Contributions</u>	<u>1,526,149</u>
3) Net City Normal Cost: (1) – (2)	1,534,317
4) Valuation Payroll	\$28,718,047
5) City Normal Cost Rate (% of pay): (3) ÷ (4)	5.5%
6) Amortization of Unfunded Actuarial Accrued Liability (16 years)	12,535,948
7) Amortization Rate (% of Pay): (6) ÷ (4)	44.7%
8) Total Contribution Rate: (5) + (7)	50.2%
9) Projected Payroll	\$28,718,047
10) Total City Contribution w/Uniform Assumptions: (8) x (9)	\$14,422,022

To further illustrate the investment risk the System is subject to, the following table shows the impact of an investment return assumption of 5.00%, with all others factors being held the same as the valuation basis. This would have a significant impact on funding and contributions. This would also be true if actual returns were 2% lower in future years.

<i>As of 12/31/2022 (\$ mm)</i>	Current Return	
	Assumption (7.00%)	2% Lower (5.00%)
Actuarial Liability	\$310.1	\$367.6
Plan Assets	\$164.3	\$164.3
Unfunded Liability	\$145.8	\$203.3
Funding Ratio	53%	45%
Employer Contribution	\$13.2	\$16.8
Total Contribution Rate	46.0%	58.5%

Appendix IV: Risk Assessment

There are a number of risks inherent in managing a pension plan/trust. Some of the most substantial risks include (not an all-inclusive list):

- **Investment Return Risk:** Future investment returns may be unfavorable compared to what is assumed for Plan funding purposes.
- **Investment Volatility Risk:** Investment returns will vary from year to year and over time, with a possible single or multiple year significant drop in plan assets. This impacts contribution amounts as well as compound returns.
- **Longevity Risk:** Plan members and beneficiaries may live longer than projected, and thus be entitled to additional years of benefit payments versus what had been expected.
- **Other Demographic Risks:** Future demographic experience may be unfavorable compared to expected rates of retirement, termination, and disability. Future salary increases may also be higher than expected, thereby increasing the liability of pay-related benefits.

Plan Maturity

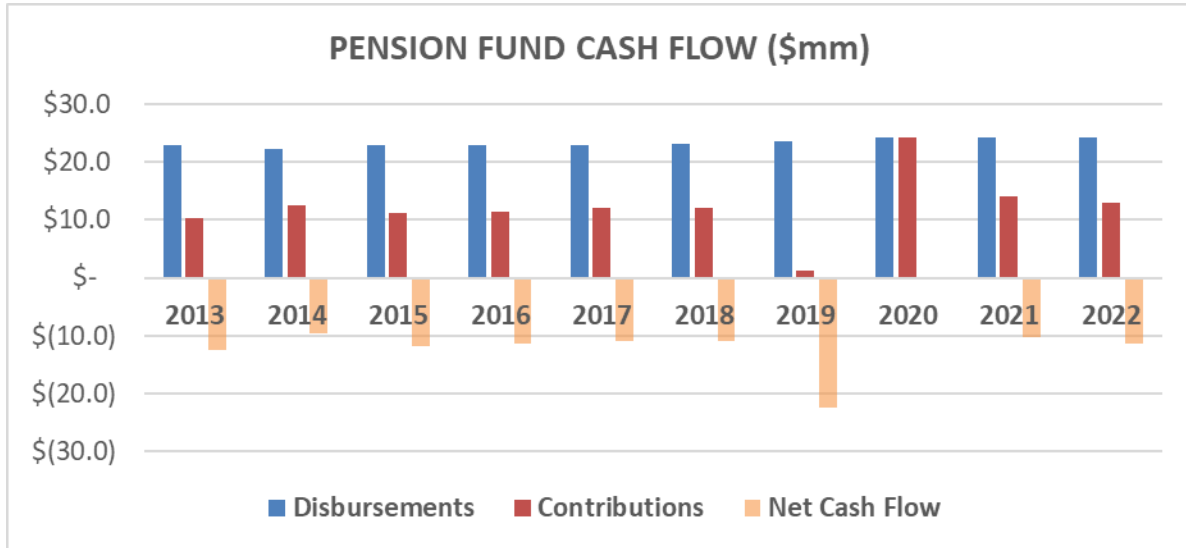

Another challenging risk faced by many pension plans is the maturing of the plan over time. This can be seen in the number of inactive (retirees, beneficiaries, etc.) versus the number of active employees in the plan population, as well as the liability of each group. As the plan matures, several risks emerge, including:

- Higher ratio of assets to payroll, which leads to a greater degree of contribution rate volatility.
- Negative cash flow (benefit payments exceeding contributions), which exacerbates the impact of an economic downturn.
- Greater degree of longevity risk (as illustrated above).
- Higher ratio of Actuarial Accrued Liability to Normal Cost, which causes more contribution volatility when demographic experience is unfavorable.

The following graphs show some of these plan maturity measures in recent years, showing how the plan is maturing over time.

The System's actuarial liability has been at least 80% inactive for the last decade, and has increased slightly over that time period. This is evidence of a very mature plan. As demonstrated by recent funding and as shown in the projections herein, funding progress is limited with this level of population maturity.

The fund has experienced significant negative cash flow (disbursements greater than contributions) in recent years, with a total ten-year negative net cash flow of more than \$110 million. This is another indication of a very mature plan. However, continued City contributions at the actuarially determined amounts will lead to funding improvement and a lower level of risk associated with negative cash flows.

Note: The employer contributions for fiscal years 2020 and 2021 were both made in calendar year 2020.
